

- <sup>9</sup>  
16. A modified human hemoglobin comprising:  
a mutant human  $\alpha$ -globin polypeptide comprising the amino acid sequence of normal human  $\alpha$ -globin modified by the substitution of Cys at position 104 by a non-Cys amino acid;
- 5 a mutant human  $\beta$ -globin polypeptide comprising the amino acid sequence of normal human  $\beta$ -globin modified by the substitution of Cys at positions 93 and 112 by non-Cys amino acids; and  
said modified hemoglobin further characterized by the substitution of Cys for the native sequence amino acid at one of the following positions:
- 10  $\beta$ -globin position 9;  
 $\beta$ -globin position 17;  
 $\beta$ -globin position 80;  
 $\alpha$ -globin position 71; or  
 $\alpha$ -globin position 53.
- <sup>10</sup>  
15 <sup>10</sup>17. A polymeric hemoglobin comprising a modified human hemoglobin according to claim <sup>5</sup>10, 11, 12, <sup>6</sup>13 or <sup>9</sup>16, wherein adjacent hemoglobins are covalently bonded to each other by one or more disulfide bridges formed by cysteine amino acid residues.
- <sup>11</sup>  
20 <sup>11</sup>18. A polymeric hemoglobin according to claim <sup>10</sup>17 wherein the modified hemoglobin is characterized by the substitution of Cys for the native sequence amino acid at  $\beta$ -globin position 9, said polymeric hemoglobin comprising seven modified hemoglobins.
- <sup>12</sup>  
A blood substitute comprising a polymeric hemoglobin according to claim <sup>10</sup>17.
- <sup>13</sup>  
25 <sup>13</sup>20. A blood substitute comprising a polymeric hemoglobin according to claim <sup>11</sup>18.
